

Provider of NIR Calibrations for Feed Grain Analysis

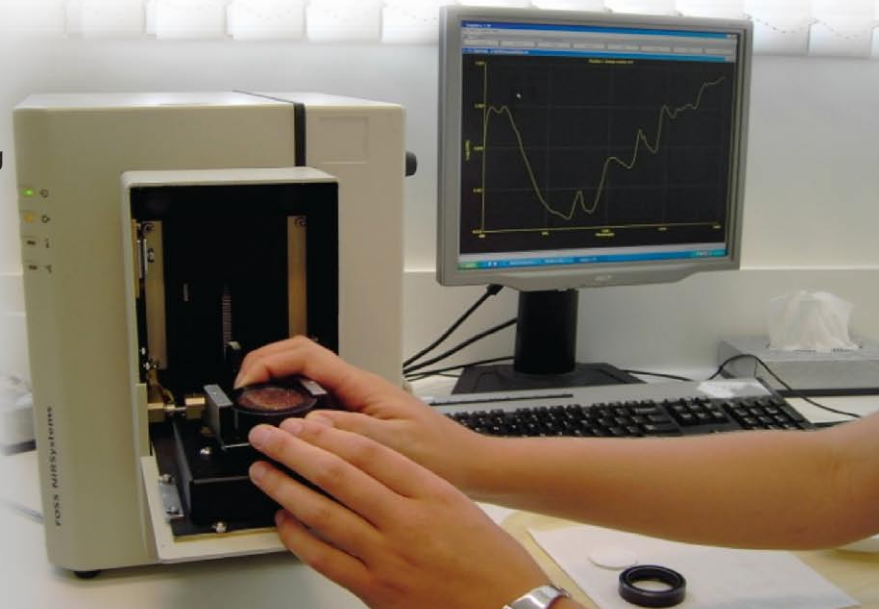

**Are you using all the available energy from the grain you feed?**

***AusScan provides the answer!***

Pig nutritionists and feed suppliers can now measure grain DE using NIR technology developed by the Australian pig industry. Rapid analysis NIR technology provides a low cost and accurate method of determining the DE content of grains. Make sure you access this latest technology and the feed cost savings it offers.

If you are not regularly getting your grain analysed for DE, you are WASTING MONEY! Without knowing the DE content, your nutritionist is relying upon book values. Grain can vary by 3-4 MJ DE/kg; unless you test the grain you don't know if it is high or low DE!

**You may be losing up to \$20 for every tonne of grain your operation uses!! This equates to \$85/sow/year.**

This loss is seen through either poorer than expected pig performance or a higher than justified feed cost.

The technology represents one of the biggest breakthroughs in animal nutrition in the last decade. The calibrations are unique to Australia and offer a new era in the accuracy and cost effectiveness of diet formulation.

Act Today – get your grain analysed using the AusScan NIR calibration technology. It's a low cost method of knowing what you are feeding and maximizing the cost effectiveness of your diets.

- If you mix your own feeds, submit samples to an AusScan licensed testing laboratory.
- If you purchase feed, ask your feed supplier if they are either using AusScan technology on their in house NIR's or alternately send samples to an AusScan licensed laboratory for testing.

### **AusScan Licensed Service Laboratories**

<b>Laboratory</b>	<b>Contact</b>	<b>Mailing Address</b>	<b>Phone</b>	<b>Email</b>
George Weston Technologies	Mirjana Prica	PO Box 1 Enfield NSW 2136	02 9764 8154	mirjana.prica@gwf.com.au
Milne AgriGroup	Sue Low	Locked Bag 19 Welshpool DC WA 6986	08 9351 0700	lows@milne.com.au
SGS Agritech	Bob Lascelles	PO Box 549 Toowoomba Qld 4350	07 4633 0599	robert.lascelles@sgs.com
Symbio Alliance	Elizabeth Owens	PO Box 4312 Eight Mile Plain Qld 4113	07 3340 5702	eowens@symbioalliance.com.au

AusScan is a business arm of the Pork CRC, with the primary role of commercialising NIR calibrations, in particular those developed by the Premium Grains for Livestock Program (PGLP) and enhanced by research from the Pork CRC.
